If you would like to be kept up to date with informative articles, new technologies in optics and our special promotions and competitions please give us a like.

Please have a look at our web site and tell us what you think. We always value our patients' feedback.

THE FUTURE

You may have noticed the large sign on the building next door to our City practice advertising The Capitol Apartments. The new development of more apartments for the city will take the whole city block with our current location becoming the foyer of the new complex. The time frame for this development to begin is October 2017.

We will take this opportunity to revitalise the practice so that we can provide the best possible eye-care for all our patients. The new location will only be 200 metres from the current practice at 29 Northbourne Ave, next door to the Commonwealth bank. You will still be able to use the current parking in the Knowles Place car park and when the light rail arrives it will be just a block from the stop.

TRANSITION LENS SPECIAL

For the month of June ONLY, you can upgrade to Transition Lenses for a special price of \$50.00. On Progressive Lenses that's a saving of over \$100.00!

DRY EYE CLINIC

In the last 5 years there has been a massive amount of research into the causes and treatment options for dry eye, and we now know that it is a complex and multifactorial disease. Severe and chronic dry eye is best managed with a combination of tailored in-office treatments, prescribed daily treatment routines at home, and for some cases- medicated eye drops and plugs that fit in the tear duct of the eye.

Our optometrist Jenny Wu specialises in the treatment of dry eye and runs a dry eye clinic in our Tuggeranong practice. Don't suffer in silence, call us to make an appointment on **6293 1171**.

Nikon Lens Technology

The reliability of the Nikon brand stems from the high-calibre technical developments and R&D activities that have been ongoing since the company's inception in 1917.

Over the last 25 years we have been using Nikon Presio multifocal lenses to provide clear and comfortable vision for many of our patients.

Nikon continues to make major strides in the ophthalmic lens industry, forging a leadership position in the development of the most advanced lens designs, materials and coatings on the market today.

Design

Nikon is a leader in ophthalmic lens technology, holding claims to a series of firsts, from High-index 1.74 material, to the first customized single vision lens. Nikon continues to strive to be a leader in technological advancement in the ophthalmic lens industry, with the development of advanced digital lens designs and innovative coatings.

Materials

High-index materials offer the highest quality technology available in eyeglass lenses. Nikon pioneered this technology by introducing its highest index material available, 1.74.

Coatings

Nikon has an extensive and illustrious history in lens coatings that spans industries as diverse and specialized as photographic equipment, high-precision instrumentation and micro-computer technology. This impressive heritage gives Nikon the leading edge in the field of ultra-thin coating technology for optical lenses. Nikon coatings are the result of a rigorous process that guarantees quality, durability, easy maintenance and of course, unequalled optical performance. Nikon offers a variety of coatings to consumers and all Nikon coatings assure three primary benefits.

Nikon has just released the Presio Master and the Presio Advance Nikon's newest and most advanced progressive lenses. Designed to reduce distortion in the peripheral portions of the lens, and is digitally enhanced for stress free vision taking visual comfort to the next level. Ask one of our qualified dispensers to explain the benefits of these lenses when you next come in.

Emergencies

Emergency appointments are available every day for patients with urgent problems.

If your eyes are suddenly red or sore, especially if only one eye is affected, or should you have any sudden reduction of vision, please contact us immediately on **6257 1103**.
